Novel microbial beta-glucuronidase genes and gene products used as reporter/effector molecule, as diagnostic tool, in positive selection, to target molecules to specific cells and to detect and track linked genes.

WPI; 2000-647075/62. N-PSDB; AAA07937.

Claim 3; Fig 5B; 116pp; English.

The present sequence is a microbial beta-glucuronidase (GUS) protein. GUS genes were obtained from six different genera: Enterobacter/Salmonella, Pseudomonas, Salmonella, Staphylococcus and Thermotoga. Microbial GUS car be used as a reporter/effector molecule for transgenic constructions and in in vitro diagnostic applications. It may also be used to generate sentinel plants that serve as bioindicators of environmental status. It may be used to generate transgenic insects for tracking insect populations or to facilitate the development of a bioassay for compounds that affect molecules critical for insect development (e.g. juvenile hormone). Secreted GUS may also serve as a marker for beneficial fungi destined for release into the environment. In animal systems, can GUS

Microbial GUS may also be used in traditional medical diagnostic assays, for drug testing, pharmacokinetic studies, bioavailability studies, diagnosis of diseases and syndromes, following progression of disease or its response to therapy. Microbial GUS has increased thermal stability, high turnover number and enzymatic activity. It is highly specific for the substrate and water soluble, and the

New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

Claim 1; SEQ ID NO 2995; 122pp; English.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to CC provide for expression of a polynuclectide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a transformed plant to the method of producing a transformed plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transformed plant with the recombinant DNA construct and growing the transformed plant with the construct and growing the transformed plant with the recombinant DNA construct is useful for improving plants with the improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, conditions are combination, modified seed cold, heat or drought tolerance, to providing recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress completed in the invention. Note: The sequence data for this patent did not compart of the printed specification but was obtained in electronic commat from USPTO at sequence.

The microbial BoGUS polypeptide can be used reporter/effector molecule and as a diagnostic tool. The products o invention can be used as markers for transgene constructions, e.g. plants or insects. They can also be used for the cleavage and detoxification of glucuronides and to examine conjugation patterns

The microbial BoGUS polypeptide can be used as reporter/effector molecule and as a diagnostic tool. The products of t invention can be used as markers for transgene constructions, e.g. in plants or insects. They can also be used for the cleavage and detoxification of glucuronides and to examine conjugation patterns of glucuronides

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel secreted form of Bacillus sp. beta-
glucuronidase (BoGUS). The microbial BoGUS polypeptide can be used as
reporter/effector molecule and as a diagnostic tool. The products of
invention can be used as markers for transgene constructions, e.g. in
plants or insects. They can also be used for the cleavage and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GUS; BoGUS; beta-glucuronidase; secreted; reporter molecule; marker; receptor molecule; diagnostic tool; transgene construction; plant; insect; cleavage; detoxification; glucuronide.

                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel secreted form of Bacillus sp. betaglucuronidase (BoGUS). The microbial BoGUS polypeptide can be used as reporter/effector molecule and as a diagnostic tool. The products of invention can be used as markers for transgene constructions, e.g. is plants or insects. They can also be used for the cleavage and detoxification of glucuronides and to examine conjugation patterns or
                                                                                                                                                                                                                                                                                                                                                                    Sequence 602

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           genes were obtained from six different genera: Enterobacter/Salmonella, CC Pseudomonas, Salmonella, Staphylococcus and Thermotoga. Microbial GUS can be used as a reporter/effector molecule for transgenic constructions and in vitro diagnostic applications. It may also be used to generate CC sentinel plants that serve as bioindicators of environmental status. It may be used to generate transgenic insects for tracking insect CC populations or to facilitate the development of a bioassay for compounds that affect molecules critical for insect development (e.g. juvenile cc hormone). Secreted GUS may also serve as a marker for beneficial fungi destined for release into the environment. In animal systems, secreted GUS may be used to achieve extracellular detoxification of glucuronides (e.g. toxin glucuronide) and to examine conjugation patterns of glucuronides. Microbial GUS may also be used in traditional medical diagnostic assays, for drug testing, pharmacokinetic studies, bioavailability studies, diagnosis of diseases and syndromes, following progression of disease or its response to therapy. Microbial GUS has increased thermal stability, high turnover number and enzymatic activity. Substrate and water soluble, and the

The microbial BoGUS polypeptide can be used as a reporter/effector molecule and as a diagnostic tool. The products of the invention can be used as markers for transgene constructions, e.g. in plants or insects. They can also be used for the cleavage and detoxification of glucuronides and to examine conjugation patterns of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  १
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
       The present sequence is a microbial beta-glucuronidase (GUS) protein. GUS genes were obtained from six different genera: Enterobacter/Salmonella, CC genes were obtained from six different genera: Enterobacter/Salmonella, CC pseudomonas, Salmonella, Staphylococcus and Thermotoga. Microbial GUS can be used as a reporter/effector molecule for transgenic constructions and CC in in vitro diagnostic applications. It may also be used to generate constructions and CC sentinel plants that serve as bioindicators of environmental status. It may be used to generate transgenic insects for tracking insect CC populations or to facilitate the development of a bioassay for compounds that affect molecules critical for insect development (e.g. juvenile cC destined for release into the environment. In animal systems, secreted GUS may be used to achieve extracellular detoxification of glucuronides (e.g. toxin glucuronide) and to examine conjugation patterns of glucuronides. Microbial GUS may also be used in traditional medical consolutic assays, for drug testing, pharmacokinetic studies, following bioavailability studies, diagnosis of diseases and syndromes, following or consolution of disease or its response to therapy. Microbial GUS has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Microbial; beta-glucoronidase; GUS; Enterobacter; Salmonella; Pseudomonas; Staphylococcus; Thermotoga; transgenic plant; bioindicator; transgenic insect; marker; glucuronide detoxification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel microbial beta-glucuronidase genes and gene products used as reporter/effector molecule, as diagnostic tool, in positive selection, target molecules to specific cells and to detect and track linked gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Codon-optimised Staphylococcus

Microbial GUS can be used as a reporter/effector molecule for transgenic constructions and in vitro diagnostic applications. It may also be used to generate serve as bioindicators of environmental status. It may be used to generate transgenic insects for tracking insect populations or to facilitate the development of a bioassay for compounds that affect molecules critical for insect development (e.g. juvenile commonne). Secreted GUS may also serve as a marker for beneficial fungical destined for release into the environment. In animal systems, secreted GUS may be used to achieve extracellular detoxification of glucuronides (e.g. toxin glucuronide) and to examine conjugation patterns of glucuronides. Microbial GUS may also be used in traditional medical diagnostic assays, for drug testing, pharmacokinetic studies, following progression of disease or its response to therapy. Microbial GUS has increased thermal stability, high turnover number and enzymatic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a microbial beta-glucuronidase (GUS) genes were obtained from six different genera: Enterobacter/s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel microbial beta-glucuronidase genes and gene products used as reporter/effector molecule, as diagnostic tool, in positive selection, target molecules to specific cells and to detect and track linked gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 602 AA;

The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of affecting the function of the corresponding gene, or capable of inhibiting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                      therapeutic protein that can be encoded by an adeno-associated virus (AAV) vector of the invention. Such vectors comprise a promoter operably positioned upstream of a nucleic acid encoding a biologically-active therapeutic mammalian serpin or cytokine polypeptide, and optionally also include an enhancer sequence and a post-transcriptional regulatory sequence. A recombinant AAV virion comprising the vector, and a mammalian cell (preferably an endothelial, islet, hepatocyte, pancreas, kidney, muscle, spleen, liver, heart, lung, or brain cell) comprising the vector are claimed. A claimed composition comprises the vector, the recombinant AAV virion, AAV viral particles, or the mammalian cell, and is used in cancer, diabetes, autoimmune disease, pancreatic disease or liver disease therapy. The composition is also used in claimed methods for preventing type I diabetes, and for reducing the rate of disease progression of type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Key

AAV is useful in the manufacture of a medicament for treating lysosomal storage disease e.g., mucopolysaccharidoses VII (MPS VII). MPS VII (Sly Syndrome) is due to the deficiency in the lysosomal enzyme beta-glucuronidase (GUS) which aids in the breakdown of glycosaminoglycans (GAGs). AAV is used in gene therapy. The present sequence is murine GUS protein. This sequence is

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 4
A25047
beta-glucuronidase (EC 3.2.1.31) precursor - rat
C;Species: Rattus norvegicus (Norway rat)
C;Date: 30-Jun-1988 #sequence revision 30-Jun-1988 #text_change 09-Jul-2004
C;Accession: A25047; S00345
R;Nishimura, Y.; Rosenfeld, M.G.; Kreibich, G.; Gubler, U.; Sabatini, D.D.;
Proc. Natl. Acad. Sci. U.S.A. 83, 7292-7296, 1986
A;Title: Nucleotide sequence of rat preputial gland beta-glucuronidase cDNA
A;Reference number: A25047; MUID:87016933; PMID:3463967
A;Accession: A25047
A;Accession: A25047
A;Accession: A25047
A;Cross-references: UNIPROT:P06760; GB:M13962; NID:g204329; PIDN:AAA41228.
A;Experimental source: female preputial gland

beta-glucuronidase (EC 3.2.1.31) uidA - Escherichia coli (strain K-12)
N;Alternate names: beta-D-glucuronoside glucuronosohydrolase; gusA protein
C;Species: Escherichia coli
C;Date: 30-Jun-1988 #sequence revision 05-Dec-1997 #text_change 09-Jul-200
C;Accession: C64918; I53717; Ā26487; S43555
R;Blattner, F.R.; Plunkett III, G.; Bloch, C.A.; Perna, N.T.; Burland, V.;
.A.; Rose, D.J.; Mau, B.; Shao, Y.
Science 277, 1453-1462, 1997
A;Title: The complete genome sequence of Escherichia coli K-12.
A;Reference number: A64720; MUID:97426617; PMID:9278503
A;Accession: C64918
A;Status: nucleic acid sequence not shown; translation not shown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Accession: S00345
